

Cloud adoption planning

The challenge

We are on the brink of the 4th industrial revolution and companies need to disrupt the market or else risk being disrupted by new players. The common denominator of most of these disruptors is that they embrace the public cloud, taking advantage of the hyperscale capacity and using it as a foundation for their innovations. To stay competitive and relevant all organizations need to assess and create their own point of view on where, how and when cloud solutions would strengthen their organization and business.

BENEFITS OF CLOUD ADOPTION PLANNING

Harness technology for the next level of efficiency

Test new products and services at a fraction of the cost and time

Empower organizations with technology that creates business value

The solution

Most organizations already have a business strategy, but we see many cases where there is no alignment with the technology strategy. Enfo can help align the plans, ensuring that cloud technology is used efficiently and that a clear transformation cloud strategy for innovation and cultural change is established.

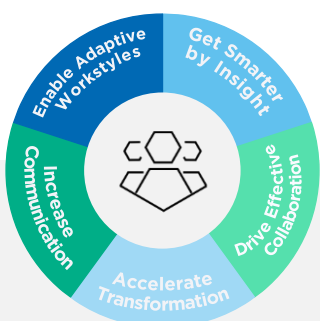

The cloud adoption planning is a great starting point to build the foundation for the organization's business case, also as a restart of a first failed attempt that started from a technology perspective without considering people and culture.

The value

Advantages of adopting the cloud falls into four categories: agility, quality, security and new scenarios. Agility, quality and cost mainly enhance your current IT environment while new scenarios is the tool for disruption for your business.

The new technology enables geographically distributed databases, serverless functions, big data, machine learning, robotics and AI, previously exclusive and difficult to use but now available and beneficial to all organizations, independent of size.

All these capabilities introduced by public cloud solutions will enable the organization to build new value streams and disrupt outdated business models in a much faster and cost-effective way.

Cloud adoption planning

The how

The cloud adoption planning is workshop driven and is followed up with defined deliverables in the form of a cloud transformation strategy, cloud adoption plan and a technology roadmap based on the organization's business strategy and requirements, aligned with the Microsoft Cloud Adoption Framework.

Our experienced transformation experts supports the organization in extracting vital information needed during the workshop, tailoring the result and handing over the cloud transformation strategy..

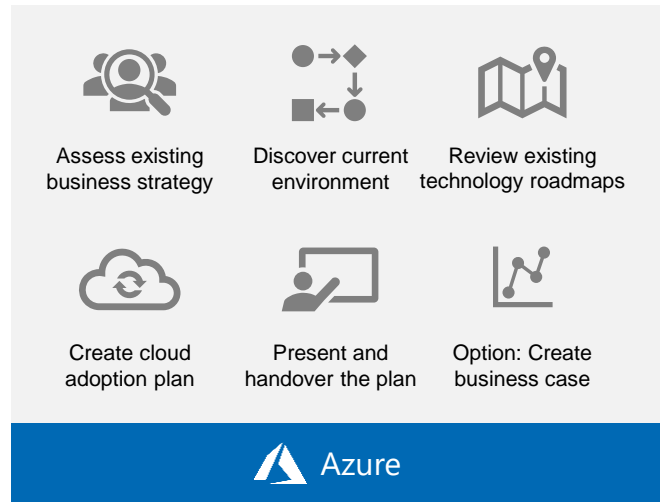

The engagement also includes valuable knowledge transfer and experience sharing during the journey.

An organization may already have their technical plan set and aligned with their business strategy but missed out on the cultural change required to succeed.

Therefore the cloud adoption planning can be tailored for those who have stalled halfway and need a restart, as well as for them that have not yet started their cloud journey.

An organization may already have their technical plan set and aligned with their business strategy but missed out on the cultural change required to succeed, therefore the cloud adoption planning can be tailored for those who have stalled halfway and need a restart, as well as for them that have not yet started their cloud journey.

We can help you understand the organizational needs, possibilities and expectations to perform a successful cloud adoption, and the engagement will expose vital input for a business case that can be create together with the organization during the engagement.

Why Enfo

Our values are at the core of our actions; collaboration, trust, continuous development and expertise.

We walk beside our customers in their data-driven business transformation, taking ownership of their transformation as if it were our own.

**Mastering
complexity**

**Confidence
in cloud**

**Genuine
care**
